

# Global Health Certificate COURSE LIST Fall 2019 (2201)

#### **Global Studies Center**

University Center for International Studies
University of Pittsburgh
4100 Wesley W. Posvar Hall
230 Bouquet Street
Pittsburgh, PA 15260
Phone: 412-648-5085

Fax: 412-624-4672 E-mail: global@pitt.edu Web: www.ucis.pitt.edu/global

### Requirements

**Introduction to Global Health (PUBHLT-1001) -** All students are required to take this course. It is not required to take this course prior to taking other certificate courses.

**2 courses from the Core List** (3 credits each, taken in any order):

Contemporary Issues in Cross-Cultural Health (NUR-1829)

Cross-Cultural Communication (LING-1263)

Global Health History (HIST-1091)

Introduction to Epidemiology (HRS-1017)

Introduction to Global Studies (PS-0550)

Introduction to Health Economics (ECON-0220)

Patients and Healers: Medical Anthropology 1 (ANTH-1761)

Sociology of Globalization and Health (SOC-0473)

Statistics in the Modern World (STAT-0800)

3 courses - 9 credits total from Elective List

Successful submission of a digital portfolio.

29938	ANTH	ANTH 1726	GLOBAL PHARMACEUTICALS	TTh, 02:30 PM to 3:45:00 PM

This course examines pharmaceuticals as cultural and social phenomena, following their development, production, marketing, and use around the globe. We will investigate a number of issues, including the growing number of drugs prescribed to Americans each year, the lack of access some populations have to essential medicines, the increasingly global nature of clinical trials, and the role of pharmaceutical companies in the opioid crisis. We will use the study of drugs and medicines to analyze the production of medical knowledge, changing perceptions of health and illness, and the role of the state and the market in the development and distribution of therapeutics. Pharmaceuticals bring together science, clinical practice, marketing, and consumerism, and this course will draw on anthropological research to trace the role they play in global flows of knowledge, capital, commodities, and people.

29939	ANTH	ANTH 1727	HEALTH AND ENVIRONMENT	TTh, 11:00 AM to 12:15:00 PM
	ARTSC	3	Wanderer,Emily Mannix	WWPH 3300

Undergraduate Seminar. This course examines the relationship between environment and health, with a special focus on the city of Pittsburgh and the surrounding environs as a case study. We will use medical anthropology to systematically investigate the effect of the environment on health and the interplay of natural and human systems. Drawing on research in political ecology, this class will consider the social, political, and economic systems that shaped Pittsburgh and its inhabitants. We will pay particular attention to the way changing industrial and environmental conditions changed incidence of disease, and how exposure to risk and disease are shaped by race, gender, and class. We will examine issues like the history of air pollution, considering the impact of the 1948 Donora Smog, an environmental disaster which killed 18 people and reshaped understandings of the dangers of pollution. We will consider the history of resource extraction such as coal mining and oil and gas drilling and their impacts on the environment and health. The course will examine how knowledge about health is produced and the development of new forms of citizen science that enlist local residents in projects to monitor issues like air quality.

24348	ANTH	ANTH 1752	ANTHROPOLOGY OF FOOD	MW, 04:30 PM to 5:45:00 PM
	ARTSC	3		WWPH 3300

This course will examine the social ecology of human nutrition using an evolutionary perspective. It will apply the concepts and principles of anthropology to the study of human nutrition and diet. It asks the questions: Where do cuisines come from? Discussions will focus on the origins of the human diet; human dietary adaptation to diverse ecological and technological situations; Social, cultural, behavioral and ecological factors that influence diet in technologically simple, modernizing and contemporary societies; the globalization of food supply and food security; and methodological issues in studying food habits and assessing nutritional status.
