Requirements

Introduction to Global Health (PUBHLT-1001) - All students are required to take this course. It is not required to take this course prior to taking other certificate courses.

2 courses from the Core List (3 credits each, taken in any order):

Contemporary Issues in Cross-Cultural Health (NUR-1829)

Cross-Cultural Communication (LING-1263)

Global Health History (HIST-1091)

Introduction to Epidemiology (HRS-1017)

Introduction to Global Studies (PS-0550)

Introduction to Health Economics (ECON-0220)

Patients and Healers: Medical Anthropology 1 (ANTH-1761)

Sociology of Globalization and Health (SOC-0473)

Statistics in the Modern World (STAT-0800)

3 courses - 9 credits total from Elective List

Successful submission of a digital portfolio.

CORE COURSES

23744 ANTH ANTH 1761 PATNTS & HEALERS: MEDCL ANTH 1 MW, 04:30 PM to 05:45 PM

ARTSC 3 Credits Alter, Joseph CL G24

This course provides an introduction to the broad sub-field of medical anthropology, including the study of ethnomedicine, ethnopsychiatry, disease and ecology, epidemiology, demography and population growth, development, and the political economy of health care. Our focus will be on the relationship between health and culture in various social contexts, with primary attention given to questions of power and inequality on the one hand, and personhood and emotion on the other. In exploring one or two case studies of ritual healing, we will look at the ways in which medical systems are integrated with larger systems of cultural meaning. We will also look at various medical systems in a cross-cultural comparative framework. Following on a consideration of so-called traditional medicine in the non-Western world, we will question the 'objectivity' of Western biomedical science and its various discourses. Extending this critique we will analyze the important relationship between poverty, and the political economy of public health in international development.

This is a CGS web course delivered entirely online through the CANVAS learning management system (LMS). The course consists of a combination of online and off-line activities and participation in asynchronous and/or synchronous meetings and discussions. Online interaction is required each week as outlined in the class syllabus and schedule. Students must have reliable internet access to take this course. Students complete the course requirements within one term and move through the course materials as a cohort.

28430	HIST	HIST 0709	HISTORY OF GLOBAL HEALTH	TTh, 10:00 AM to 10:50 AM
HSA DIV GI	ARTSC	3 Credits	Webel,Mari K	BENDM 157

In the 21st century, many challenges to public health ¿ including the HIV/AIDS pandemic, outbreaks of the zika or ebola viruses, or disparities in maternal mortality rates ¿ transcend national boundaries and trigger international responses. Matters of health and illness play a key role in how we understand our place in an increasingly interconnected world. Public policy initiatives, non-profit organizations, government agencies, and grassroots movements may all take aim at the problem of health disparities globally, but they do so, often, based on widely diverging strategies and goals. Why? How did ¿global health¿ take shape as the field we know in the present day? What do the historical roots of global health tell us about its potential for the future ¿ and the challenges that practitioners may face in the years to come? This introductory course takes an interdisciplinary approach to the history of global public health, exploring wide-ranging episodes that shaped the field between the late 19th century and the present. We will discuss the changing goals of public health, particularly ideas about eradication, vaccination, and preventive health as they lead us to think about how people, environments, and causes of illness are understood and defined. We will explore the institutional development of international organizations and global health regimes as we study strategies of coping with disease and illness. We will question how and why particular diseases have been understood as ¿new¿ or ¿emerging, ¿ placing shifting international attention in the context of local experiences. Emphasizing the persistence of particular causes of poor health in human history, as well as continuities in treatment and disease prevention strategies, we will examine sources and examples from around the world. No prerequisite courses are required and students from all majors, minors, and concentrations are welcome.

This is a CGS web course delivered entirely online through the CANVAS learning management system (LMS). The course consists of a combination of online and off-line activities and participation in asynchronous and/or synchronous meetings and discussions. Online interaction is required each week as outlined in the class syllabus and schedule. Students must have reliable internet access to take this course. Students complete the course requirements within one term and move through the course materials as a cohort.
